Mablethorpe Primary Academy	Geography
Theme: Stone Age to Iron Age	Term 2

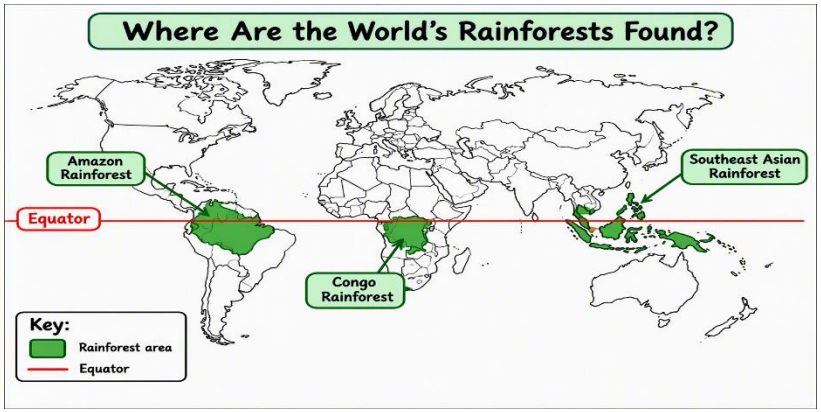

Key Question: How might life in a rainforest, during the Stone Age, have been different from life in Britain?

Prior Knowledge and Overview: Children have previously looked at Stone age to Iron age and the advancements During this unit, the children will learn about Rainforests, their location, climate and how rainforests support survival.

Key Vocabulary	
equator	The equator is an imaginary line that circles right around the middle of the Earth, sitting halfway between the North Pole and the South Pole.
climate	Climate is the usual pattern of weather—like temperature, wind, and rain—in a place over a very long time, usually 30 years.
biome	A biome is a huge natural area on Earth with its own special type of weather, plants, and animals.
rainforest	Rainforests are warm, wet forests that get a huge amount of rain every year and are home to more than half of the world's plant and animal species.
conservation	Conservation means looking after our planet's natural resources, animals, and plants so they do not run out or get harmed.

deforestation	Deforestation is when large areas of trees in a forest are cut down or burned by humans and not replaced
environment	The environment is everything around us, including the air we breathe, the water we drink, the land we live on, and all the plants and animals that share our world.
