

How SMSC Can Be Seen in the Design and Technology Curriculum for the Mablethorpe Child

Spiritual Development

Growth in self-confidence and belief in their own abilities is supported and encouraged through celebration of creativity and innovation in a positive working atmosphere. Design and Technology is driven by our creative instincts to invent, innovate and enterprise to adapt and overcome challenges.

Moral Development

While designing and making new products, children are encouraged to consider the impact they are having and the moral dilemmas they will face. Children will explore and build an understanding of how their actions affect the wider world and people in it. Children will practice working sustainably, considering the key issue of climate change and caring for our world.

Social Development

Through this curriculum, children will explore self-regulation and independence as well as building the ability to work collaboratively with others respecting their views and beliefs. Children are encouraged to support others in their processes, prompting and challenging in a constructive manner. Children will formulate and expand their ideas through discussions with peers and adults.

Cultural Development

Children will explore how industry has impacted the world we live in today changing how we live and work as a society and how this can be seen differently across the world. They will explore the process of introducing new, innovative ideas into the world we live in today and the key sources of this across the world. Children will be encouraged to consider the views and beliefs of other cultures when considering the features their products may have in order to meet the interests of their audience. We aim to build a respect and understanding of cultures across the world and celebrate them.
